

MOUNTING OPTIONS

These custom designed brackets when integrated with Norbco Circulator Fans provide 100% adjustability enabling the operator to maximize air flow over the cows.

Feed Line Post Mount

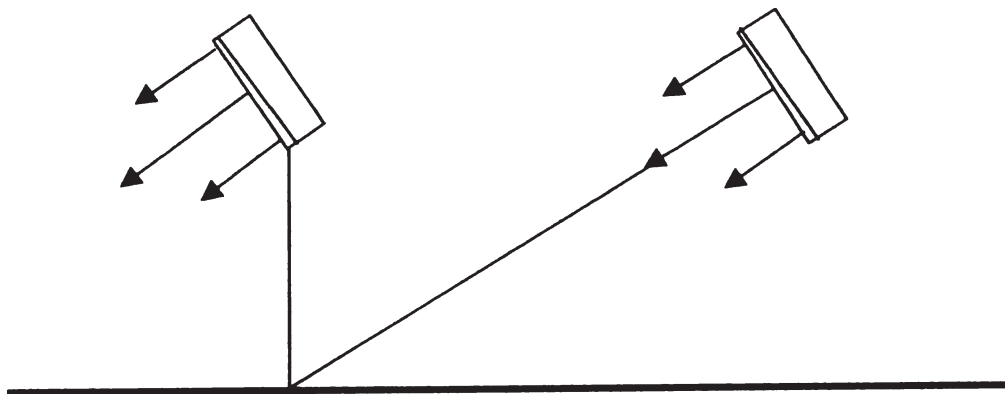

Wood or Steel Column

Note: Circular fans hang from top of fan.

Fan Placement Suggestions:

- Mount 36" Fans 24 to 30 ft. apart
- Mount fans 8-10' above the floor or cow platform
- Angle fans (approx. 30°) so that air is directed toward animals
- Holding areas - Mount 36" fans in rows 8' apart with the fans spaced 20-24 ft. apart blowing down on cows. If low ceiling height is a problem consider placing the fans on one side of the holding area blowing across. Ideal for use with mist kits or shower nozzle systems
